2018 CERTIFICATION

Consumer Confidence Report (CCR)

Saucier	Utilities, Inc.	
	Water System Name	

0240011

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH. Please check all boxes that apply.

****	is a copy of the C	CR and Certification to the MSDH. Please check all boxes that apply.
		re informed of availability of CCR by: (Attach copy of publication, water bill or other)
		Advertisement in local paper (Attach copy of advertisement)
		☐ On water bills (Attach copy of bill)
		☐ Email message (Email the message to the address below)
		□ Other
	Date(s) custo	mers were informed: / /2019 / /2019 / /2019
√	CCR was distr methods used	ributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery
	Date Mailed/	Distributed: 06/25/2019
	CCR was distri	buted by Email (Email MSDH a copy) Date Emailed: / /2019
		☐ As a URL(Provide Direct URL)
		☐ As an attachment
		☐ As text within the body of the email message
	CCR was publis	shed in local newspaper. (Attach copy of published CCR or proof of publication)
	Name of New	spaper:
	Date Publishe	d://
	CCR was posted	d in public places. (Attach list of locations) Date Posted: / / 2019
	CCR was posted	on a publicly accessible internet site at the following address:
I here above and co	orrect and is consiste	CCR has been distributed to the customers of this public water system in the form and manner identified tribution methods allowed by the SDWA. I further certify that the information included in this CCR is true in the water quality monitoring data provided to the PWS officials by the Mississippi State Department
of He	alth, Bureau of Publ	ic Water Supply

Fax: (601) 576 - 7800

** Not a preferred method due to poor clarity **

CCR Deadline to MSDH & Customers by July 1, 2019!

2018 Annual Drinking Water Quality Report Saucier Utilities, Inc. PWS#: 0240011 June 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Hattiesburg Miocene Series

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Saucier Utilities have received a moderate susceptibility ranking to contamination.

If you have any questions about this report or concerning your water utility, please contact Debbie House at 228-832-6841. We want our valued customers to be informed about their water utility. If you want to learn more, please attend the meetings scheduled for the last Thursday of each month at 7:00 PM at the Saucier Utilities Office.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1st to December 31st, 2018. In cases where monitoring wasn't required in 2018, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10.000.000.

<u> </u>				TEST R	ESUL 1	ΓS		
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
Inorgani	c Contar	ninants						-
10. Barium	N	2018	.0022	.00160022	ppm	2	2	Discharge of drilling wastes; discharge

13. Chromium	N	2018	.7	.6 - ,7	ppb	100	100	Discharge from steel and pulp mills;
14. Соррег	N	2015/17*	4		_			erosion of natural deposits
16. Fluoride	N	2018		0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
17. Lead	N		.209	.204 – .209	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
	14	2015/17*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Disinfection	_	-Products	S					
81. HAA5	N	2018	12	No Range	To a second			
	-			140 Mange	ppb	0	60	By-Product of drinking water
	N	2018	7.89					By-Product of drinking water disinfection.
82. TTHM Total rihalomethanes]	N		7.89	No Range	bbp	0	80	By-Product of drinking water disinfection. By-product of drinking water chlorination.
Total	N		7.89					By-product of drinking water

^{*} Most recent sample. No sample required for 2018.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

Significant Deficiencies

Monitoring and Reporting of Compliance Data Violations:

During a sanitary survey conducted on 4/27/2017, the Mississippi State Department of Health cited the following significant

Inadequate Internal Cleaning/Maintenance of Storage Tanks

Corrective Actions: This system is out of compliance and subject to enforcement action.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Saucier Utilities, Inc. works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
